

## Pandas

Pandas is a Python open-source library that provides various datastructures to perform effective operations on the data.

Pandas provides two data structures such as:

- Series
- DataFrame

```
import numpy as np
import pandas as pd
```

```
"""
    A Pandas Series is like a column in a table.
    It is a one-dimensional array holding data of any type.
    """
```

```
series = pd.Series([1,2,3,4,5]) #creating a pandas series using python list
series
```

```
0    1
1    2
2    3
3    4
4    5
dtype: int64
```

```
a = np.arange(1, 10) #creating a numpy array
a
```

```
array([1, 2, 3, 4, 5, 6, 7, 8, 9])
```

```
ser = pd.Series() #creating an empty pandas series
ser
```

```
Series([], dtype: object)
```

```
ser1 = pd.Series(a) #creating a pandas series using numpy array
ser1
```

```
0    1
1    2
2    3
3    4
4    5
5    6
6    7
7    8
8    9
dtype: int64
```

```
ser1[8] #accessing elements using index
```

```
9
```

```
ser1[5]
```

```
6
```

```
ser2 = pd.Series(a, index=['a','b','c','d','e','f','g','h','i']) #creating a pandas series using numpy array with user-defined indexes
ser2
```

```
a    1
b    2
c    3
d    4
e    5
f    6
g    7
h    8
i    9
dtype: int64
```

```
ser2['a']
```

```
1
```

```
ser2[0]
```

```
1
```

```
ser2['e'] = 10 #re-initializing item using indexing
ser2
```

```
a      1
b      2
c      3
d      4
e     10
f      6
g      7
h      8
i      9
dtype: int64
```

```
ser3 = pd.Series(4, index=['a','b','c']) #creating a pandas series using a scalar value
ser3
```

```
a      4
b      4
c      4
dtype: int64
```

```
ser3['c']
```

4

```
"""
    A Pandas DataFrame is a 2 dimensional data structure, like a 2 dimensional array, or a table with rows and columns.
    A DataFrame is a collection of Pandas Series objects, all sharing the same index.
"""
```

```
l = [1,2,3,4,5]
df = pd.DataFrame(l)
df

```

type(df.event)

**pandas.core.series.Series**

```
def __init__(data=None, index=None, dtype: Dtype | None=None, name=None, copy: bool | None=None, fastpath: bool=False) -> None
```

One-dimensional ndarray with axis labels (including time series).

Labels need not be unique but must be a hashable type. The object supports both integer- and label-based indexing and provides a host of methods for performing operations involving the index. Statistical methods from ndarray have been overridden to automatically exclude
